Diagnostics and Analysis of your Current Integrated Pest Management (IPM) Strategy.

Biological Protection Action Review and Planning.

Get the best for your farm!

Mitigate the risk and achieve higher margins through input reduction and better crop quality.

Build the necessary base plan to take full advantage of BugVision Software.

We will build and document a Pest Management Plan of Action that is practical, cost-effective and ready to deploy when you need it most.

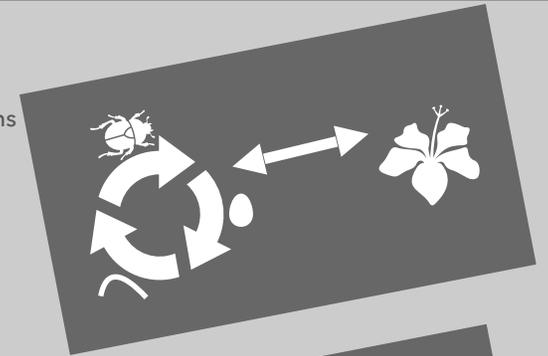

BUGVISION IPM STRATEGY

A new approach for cost effective and consistent production.

AUDIT PEST RISK:

According to crop sensitivity to a range of different pests, we assess the risk of various situations and provide recommendations to mitigate the risk.

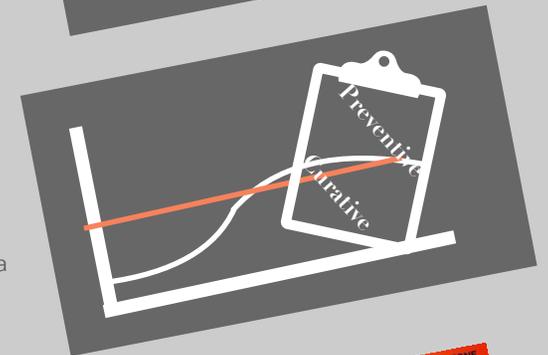

Having an in-depth knowledge of pest control through the introduction of beneficial bugs, we build strategies that are both beneficial to your business and keeping crops free from toxic substances wherever possible.

IMPLEMENT PRO-ACTIVE PLANS:

For each crop and specific situations (crop stages, environment, time of the year, etc.) we work alongside you to implement a preventive plan that will keep pests under control.

We also set thresholds for monitoring pests, and when required, a curative plan is triggered to get pest infestations under control.

COST-EFFECTIVE SOLUTIONS:

Costs for different strategies are calculated and compared to previous budgets.

Our ultimate goal is to find the most Cost-Effective Solution for each scenario that you may face in order to provide high quality crops at the lowest cost.

We will deliver a low cost, efficient, and worry free IPM strategy!
